

Studies in the Faculty of Technology and Education cover the areas of technical sciences, humanities and social sciences in which students acquire competence and qualifications required to integrate scientific and professional initiatives in the field of modern technologies and civilization solutions, with a particular emphasis on gaining the expertise and skills of continuing vocational training. Programmes of studies created by the Faculty enable students to use various tools of intercultural and interpersonal communication as well as essential skills to function in the information society. The profile of a modern graduate formed in such a way, combining the elements of technical and vocational with humanistic and social education, meets the needs of the labour market and prepares graduates for the use of modern technologies in education and social communication. Students graduate with requisite knowledge and skills that enable them to perform, achieve and innovate in the modern world.
